

File Usage Guide

Jeremy Ellsworth Designs LLC is a full-service design agency catering to businesses and individuals, with a focus on delivering high-quality, professional design solutions.

Use The Right File,
For The Right Job!

Your Five-Star Design

A logo is an integral part of a company's identity, and it is used in a variety of ways to represent the company's brand. When working with logo files, it's important to understand the different file types and their uses.

Here's a simple guide to help you navigate through them:

Vector

Print/Edit Quality Files

Vector files are ideal for print and can be enlarged without losing quality.

Always keep a vector version of your logo.

AI

The most common vector format and can be fully edited in Adobe Illustrator.

EPS

A universal file format that can be resized and edited in any design software.

PDF

Can be viewed and printed from most devices without distortion.

SVG

Ideal for web use as the file size is usually small and is editable in many design software

Print Materials, Large Banners, Signages, Vehicle Wraps, Professional Design Work, Website and Digital Use where scaling is needed.

Raster

Digital Quality Files

Raster graphics are made up of pixels and can lose quality when scaled up.

JPG

Can be used as profile photos and does not support transparency.

PNG

Supports transparency and can serve as watermark

Websites, PowerPoint presentations, office documents, social media, email, and anywhere else where scaling isn't needed.

Important Notice!

We mainly provide the RGB file profiles, should you need the CMYK format, please let us know and make a request.

LAYOUT

File Usage Guide

A consistent design across mediums is key to a coherent brand identity. It creates a unified voice that's instantly recognizable, builds trust with customers, and strengthens brand recall.

Here's a simple guide to help you navigate through them:

Vector

USAGE

RGB

RED • GREEN • BLUE

Mainly used for electronic displays like TVs, Computer Screens, Smartphones, Digital Cameras.

RGB has a wider range of colors, which provides more options, resulting in more vibrant outputs

CMYK

CYAN • MAGENTA • YELLOW • KEY

Mainly used for full-color printing like Magazines, Books, and Brochures.

CMYK has a smaller array of colors. RGB hues may not be available in CMYK.

RGB
makes me pop!

RGB AND CMYK WHAT'S THE DIFFERENCE?

RGB is for digital and screen, CMYK is for printing.
RGB can represent more colors than CMYK.

CMYK
makes me desaturated!

Why We Use RGB?

- Almost, if not all, forms of advertising are now geared towards web usage - making RGB the most maximized mode for digital collaterals.
- Wider color range:
Colors project different psychological effects. Having more hues to play with, may result in not just a beautiful output, but also convey what your brand intends
